# Frameserve DVD to an Advanced Video Editor

This guide will describe how to frameserve a DVD (or MPEG2, MPG, TS, or HDTV files) to a video editor that does not support DVD or MPEG2. Frameserving the DVD means that you create a direct link between the DVD video and the editing tool, you don't have convert to a temporary huge AVI file or reconvert to a lossy AVI video format. For example if you want to edit your DVD in Premiere Pro, Ulead Videostudio, Vegas.

If you just want to do some basic DVD cutting and joining, don't use this method, use for example TMPGEnc DVD Author, select Add DVD Video and select the VIDEO\_TS on the DVD and you can do basic editing without any video conversion.

Another method to edit DVD is to use MPEG Video Wizard, you can do a lot advanced editing and the video that is not edited will not be reconverted again.

#### Tools required

DVDDecrypter if you have a commercial DVD DGMPGDec VFAPI Reader Premiere Pro, Ulead VideoStudio, Vegas or your favorite video editor

#### Guide

Copy the DVD to your hard drive, browse the DVD and copy the entire VIDEO\_TS folder to your HD.

If you have a commercial DVD you must use **DVDDecrypter** and rip the DVD to your HD. Read information from the link below:

http://www.videohelp.com/guides.php?guideid=496&howtoselect=6;3 4#496.

DGIndex

Copy all files from the DGMPGDEC zip to one folder; copy also the VFAPI files to that folder.

#### Start DGIndex.exe

Open the main movie. Hold in CTRL or SHIFT to select the files, usually the VTS\_01\_1.VOB-VTS\_01\_X.VOB.

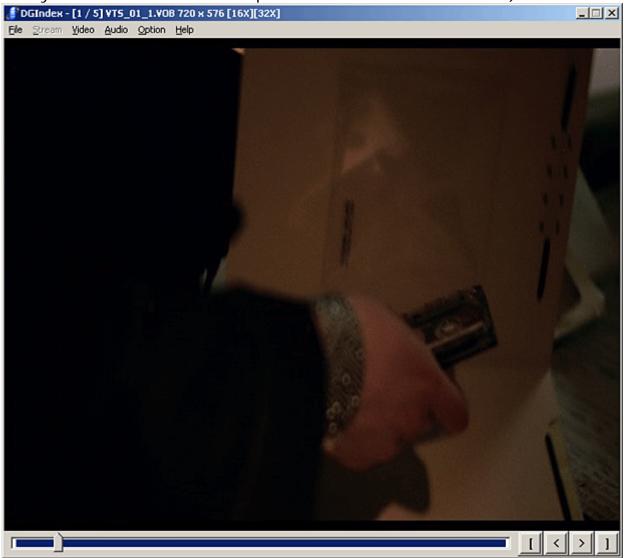

(You can also open MPG/MPEG2/TS/HDTV files; use the Stream to select correct streams if you open HDTV TS files)

	my bocaments	02_2.VOE		188 940 KB	VOB File
		UTS_03_0.VOE		10 KB	VOB File
		[ [ _ ] VTS_03_1.VOE	3	288 602 KB	VOB File
	My Computer				
		•			Þ
			r		
	My Network	File name:	"VTS_01_5.V0B" "VTS_01_1.V0B"	"VTS_01 💌	Open
	Places	Files of type:	vob, mpg, mpeg, m2v, tp, ts, trp, pva		Cancel
			*		

Drag the bar at the bottom to view the DVD and check that you have opened the entire DVD. If not try reopen other VOB files.

Select under Audio->Output method->Decode to wav. Select under Audio->Track method and the track you want to keep. Select File->Save project and save it. Only the audio will be converted to a wav file and it will take some minutes, the video will not be converted.

(If you want to convert several audio tracks, select the track number and then File-Save project again. If your editing tool supports AC3 or DTS you can select Audio->Output Method->Demux all tracks.)

#### VFAPI

Convert the DGIndex project file to a "fake" AVI file that most editing and encoding tools can open.

Start VFAPI Reader

Click on Add file

Click the drop-down next to Files of type and select **DGIndex Project** file (.d2v)

Open the .d2v you created with dgindex

Hit convert and a "fake" avi will be created. The video WILL not be converted.

VFAPI Reader Codec - v1.05 - Translated to english by KiinG					
Output file	Input file	Options			
E:\dvdframeserve\dvdvideo_d2v_vfap	E:\dvdframeserve\dvdvide				
Add file Remove file		Convert	Quit		

#### Frameserving video files

You should now have a wav file, .d2v file and the "fake" avi. Try play the .avi with Windows Media Player, it should work (the playback may be a bit slow). If it doesn't try run the vifpset.bat included in VFAPI reader.

### Editing or Encoding

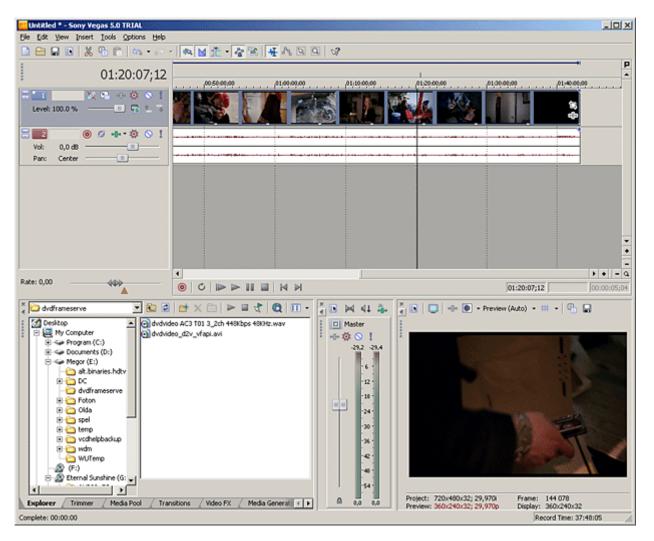

You should now be able to open the video and audio in your editing tool.

Examples:

## **Premiere Pro**

## Vegas
